CD Player Service Precautions

- For pickup unit(CXX1285) handling, please refer to "Disassembly" (CX-916 Service Manual CRT2300).
 During replacement, handling precautions shall be taken to prevent an electrostatic discharge (protection by a short pin).
- 2. During disassembly, be sure to turn the power off since an internal IC might be destroyed when a connector is plugged or unplugged.
- 3. Please checking the grating after changing the service pickup unit(see page 46).

1. SAFETY INFORMATION

CAUTION

This service manual is intended for qualified service technicians; it is not meant for the casual do-it-yourselfer. Qualified technicians have the necessary test equipment and tools, and have been trained to properly and safely repair complex products such as those covered by this manual.

Improperly performed repairs can adversely affect the safety and reliability of the product and may void the warranty. If you are not qualified to perform the repair of this product properly and safely; you should not risk trying to do so and refer the repair to a qualified service technician.

WARNING

This product contains lead in solder and certain electrical parts contain chemicals which are known to the state of California to cause cancer, birth defects or other reproductive harm.

Health & Safety Code Section 25249.6 - Proposition 65

2. EXPLODED VIEWS AND PARTS LIST

NOTE:

- lacktriangle Parts marked by "*" and \otimes can not be supplied.
- \blacksquare Screws adjacent to ∇ mark on the product are used for disassembly.

4.1 TUNER AMP UNIT

NOTE FOR PCB DIAGRAMS

- The parts mounted on this PCB include all necessary parts for several destination.
 For further information for respective destinations, be sure to check with the schematic diagram.

5. ELECTRICAL PARTS LIST

NOTES:

- Parts whose parts numbers are omitted are subject to being not supplied.
- The part numbers shown below indicate chip components.

Chip Resistor

 $\mathsf{RS1/} \bigcirc \mathsf{S} \bigcirc \bigcirc \cup \mathsf{J,RS1/} \bigcirc \cup \mathsf{S} \bigcirc \bigcirc \cup \mathsf{J}$

Chip Capacitor (except for CQS.....)

CKS....., CCS....., CSZS.....

6. ADJUSTMENT

6.1 CD ADJUSTMENT

1) Precautions

• This unit uses a single power supply (+5V) for the regulator. The signal reference potential, therefore, is connected to REFO(approx. 2.5V) instead of GND.

If REFO and GND are connected to each other by mistake during adjustments, not only will it be impossible to measure the potential correctly, but the servo will malfunction and a severe shock will be applied to the pick-up. To avoid this, take special note of the following.

Do not connect the negative probe of the measuring equipment to REFO and GND together. It is especially important not to connect the channel 1 negative probe of the oscilloscope to REFO with the channel 2 negative probe connected to GND.

Since the frame of the measuring instrument is usually at the same potential as the negative probe, change the frame of the measuring instrument to floating status

If by accident REFO comes in contact with GND, immediately switch the regulator or power OFF.

- Always make sure the regulator is OFF when connecting and disconnecting the various filters and wiring required for measurements.
- Before proceeding to further adjustments and measurements after switching regulator ON, let the player run for about one minute to allow the circuits to stabilize.
- Since the protective systems in the unit's software are rendered inoperative in test mode, be very careful to avoid mechanical and /or electrical shocks to the system when making adjustment.
- Disc detection during loading and eject operations is performed by means of a photo transistor in this unit. Consequently, if the inside of the unit is exposed to a strong light source when the outer casing is removed for repairs or adjustment, the following malfunctions may occur.
 - *During PLAY, even if the eject button is pressed, the disc will not be ejected and the unit will remain in the PLAY mode.
 - *The unit will not load a disc.

When the unit malfunctions this way, either re-position the light source, move the unit or cover the photo transistor.

2) Test Mode

This mode is used for adjusting the CD mechanism module of the device.

- Test mode starting procedure
 Reset while pressing the 4 and 6 keys together.
- Test mode cancellation Switch ACC, back-up OFF.
- After pressing the EJECT key, do not press any other key until the disk is completely ejected.
- If the

 or

 key is pressed while focus search is in progress, immediately turn the power off (otherwise the actuator may be damaged due to adhesion of the lenses).
- Jump operation of TRs other than 100TR continues after releasing the key. CRG move and 100TR jump operations are brought into the "Tracking close" status when the key is released.
- Powering Off/On resets the jump mode to "Single TR (91)", the RF AMP gain setting to 0 dB, and the automatic adjustment value to the initial value.

Flow Chart

6.2 CHECKING THE GRATING AFTER CHANGING THE PICKUP UNIT

· Note:

The grating angle of the PU unit cannot be adjusted after the PU unit is changed. The PU unit in the CD mechanism module is adjusted on the production line to match the CD mechanism module and is thus the best adjusted PU unit for the CD mechanism module. Changing the PU unit is thus best considered as a last resort. However, if the PU unit must be changed, the grating should be checked using the procedure below.

Purpose :

To check that the grating is within an acceptable range.

· Symptoms of Mal-adjustment :

If the grating is off by a large amount symptoms such as being unable to close tracking, being unable to perform track search operations, or track searching taking a long time, may appear.

· Method:

Measuring Equipment

· Oscilloscope, Two L.P.F.

Measuring Points

• E, F, REFOUT

Disc

• ABEX TCD-784

Mode

TEST MODE

Checking Procedure

- 1. In test mode, load the disc and switch the 5V regulator on.
- 2. Using the ▶ and ◀ buttons, move the PU unit to the innermost track.
- 3. Press key 3 to close focus, the display should read "91". Press key 2 to implement the tracking balance adjustment the display should now read "81". Press key 3 2 times. The display will change, returning to "81" on the fourth press.
- 4. As shown in the diagram above, monitor the LPF outputs using the oscilloscope and check that the phase difference is within 75°. Refer to the photographs supplied to determine the phase angle.
- 5. If the phase difference is determined to be greater than 75° try changing the PU unit to see if there is any improvement. If, after trying this a number of times, the grating angle does not become less than 75° then the mechanism should be judged to be at fault.

• Note

Because of eccentricity in the disc and a slight misalignment of the clamping center the grating waveform may be seen to "wobble" (the phase difference changes as the disc rotates). The angle specified above indicates the average angle.

• Hint

Reloading the disc changes the clamp position and may decrease the "wobble".

Grating waveform

 $\begin{array}{l} Ech \rightarrow Xch \ \ 20mV/div, \ AC \\ Fch \rightarrow Ych \ \ 20mV/div, \ AC \end{array}$

COMMON

SEGMENT

7.2 DIAGNOSIS

7.2.1 DISASSEMBLY

■ Removing the Case Unit(not shown)

- 1. Remove the Case Unit.
- Removing the Panel Assy(Fig.1)

Disengage the stoppers at two locations.

Remove the Panel Assy.

Removing the CD Mechanism Module (not shown)

- 1. Remove the four screws.
- 2.Disconnect the connector, and then remove the CD Mechanism Module.

Fig.1

Removing the Tuner Amp Unit(Fig.2)

Remove the two screws.

Remove the three screws.

Remove the screw.

Straighten the tabs at four locations indicated.

Remove the Tuner Amp Unit.

Fig.2

7.2.2 TEST MODE

Error Messages

If a CD is not operative or stopped during operation due to an error, the error mode is turned on and cause(s) of the error is indicated with a corresponding number. This arrangement is intended at reducing nonsense calls from the users and also for facilitating trouble analysis and repair work in servicing.

- (1) Basic Indication Method
- 1) When SERRORM is selected for the CSMOD (CD mode area for the system), error codes are written to DMIN (minutes display area) and DSEC (seconds display area). The same data is written to DMIN and DSEC. DTNO remains in blank as before.
- 2) Head unit display examples

Depending on display capability of LCD used, display will vary as shown below. xx contains the error number.

8-digit display	6-digit display	4-digit display
ERROR-xx	ERR-xx	E-xx
	OR	
	Err-xx	

(2) Error Code List

VZ/ LIIC	z) Error Code List		
Code	Class	Displayed error code	Description of the code and potential cause(s)
10	Electricity	Carriage Home NG	CRG can't be moved to inner diameter.
			CRG can't be moved from inner diameter.
			ightarrow Failure on home switch or CRG move mechanism.
11	Electricity	Focus Servo NG	Focusing not available.
			ightarrow Stains on rear side of disc or excessive vibrations on REWRITABLE.
12	Electricity	Spindle Lock NG	Spindle not locked. Sub-code is strange (not readable).
			ightarrow Failure on spindle, stains or damages on disc, or excessive vibrations.
		Subcode NG	A disc not containing CD-R data is found. Turned over disc are found,
			though rarely.
			ightarrow Failure on home switch or CRG move mechanism.
		RF AMP NG	An appropriate RF AMP gain can't be determined.
			ightarrow CD signal error.
17	Electricity	Setup NG	APC protection doesn't work. Focus can be easily lost.
			ightarrow Damages or stains on disc, or excessive vibrations.
30	Electricity	Search Time Out	Failed to reach target address.
			ightarrow CRG tracking error or damages on disc.
A0	System	Power Supply NG	Power (VD) is ground faulted.
			ightarrow Failure on SW transistor or power supply (failure on connector).

Remarks: Mechanical errors are not displayed (because a CD is turned off in these errors).

Unreadable TOC does not constitute an error. An intended operation continues in this case.

A newly designed head unit must conform to the example given above.

Upper digits of an error code are subdivided as shown below:

1x: Setup relevant errors, 3x: Search relevant errors, 3x: Search relevant errors, Ax: Other errors.

New Test Mode

S-CD plays the same way as before.

If an error such as off focus, spindle unlocking, unreadable sub-code, or sound skipping occurs after setup, its cause and time occurred (in absolute time) are displayed.

During setup, operational status of the control software (internal RAM: CPOINT) is displayed.

These displays and functions are prepared for enhancing aging in the servicing and efficiency of trouble analysis.

(1) Shifting to the New Test Mode

- ① Turn on the current test mode by starting the reset from the key (it varies between the products).
- ② Select S-CD for the source through the specified procedure including use of the [SOURCE] key, and inserting the disc. Then, press the [Jump Mode Selector] key while maintaining the regulator turned off.
- ③ After the above operations, the new test mode remains on irrespective of whether the S-CD is turned on or off. You can reset the new test mode by turning on the reset start.
- * With some products, the new test mode can be reset through the same operations as that employed for shifting to the STBY mode (while maintaining the Acc turned off).

(2) Key Correspondence

Key	Test mode		Ne	ew test mode
(Example)	Power Off	Power On	In-play	Error Production
BAND	To power on	To power off	_	Time/Err.No. switching
	(offset adjustment performed)			
>	_	FWD-Kick	FF/TR+	_
◀	_	REV-Kick	REV/TR-	_
1	_	T.Close (AGC performed)	Scan	_
		/parameter display switching		
2	RF AMP gain switching	Parameter display switching	Mode	_
		/T.BAL adjustment/T.Open		
3	To power on	F.Close/RF AGC/F.T.AGC	_	_
	(offset adjustment not performed)			
6	_	F.Mode switching	Auto/Manu	T.No./Time switching
		/T.Close (no AGC)/Jump switching		

Note: Eject and CD on/off is performed in the same procedure as that for the normal mode.

(3) Cause of Error and Error Code

			
Code	Class	Contents	Description and cause
40	Electricity	Off focus detected.	FOK goes low.
			→ Damages/stains on disc, vibrations or failure on servo.
41	Electricity	Spindle unlocked.	FOK = Low continued for 50 msec.
			ightarrow Damages/stains on disc, vibrations or failure on servo.
42	Electricity	Sub-code unreadable.	Sub-code was unreadable for 50 msec.
			ightarrow Damages/stains on disc, vibrations or failure on servo.
43	Electricity	Sound skipping detected.	Last address memory function was activated.
			ightarrow Damages/stains on disc, vibrations or failure on servo.

Note: Mechanical errors during aging are not displayed.

The error codes should be indicated in the same way as in the normal mode.

DEH-1000,10,1050

(5) Display Examples

1) During Setup (When status no. = 11)

TRK No. MIN. SEC. 11 11' 11"

2) During Operation (TOC read, TRK search, Play, FF and REV)

The same as in the normal mode.

3) When a Protection Error Occurred

Switch to the following displays (A) and (B) using the [BAND] switch:

(A) Error occurrence timing display in absolute time.

An example: Error occurred in 12th tune at 34'56" in absolute time.

TRK No. MIN. SEC. 12 34' 56"

(B) Error No. display

An example: Error #40 (Off focus is detected)

ERROR-40

7.3 BLOCK DIAGRAM

8. OPERATIONS AND SPECIFICATIONS

8.1 OPERATIONS

Key Finder

Head Unit

Basic Operation

To Listen to Music

The following explains the initial operations required before you can listen to music.

Note:

• Loading a disc in this product.

1. Select the desired source (e.g. tuner).

Each press changes the Source ...

■ Head Unit

Each press of the SOURCE button selects the desired source in the following order: Built-in CD player \rightarrow Tuner

Note:

• The sound source will not change if no disc is set in this product.

2. Raise or lower the volume.

3. Source OFF.

Hold for 1 second or more

Basic Operation

Basic Operation of Tuner

Manual and Seek Tuning —

 You can select the tuning method by changing the length of time you press the ◄/▶ button.

Manual Tuning (step by step)	0.5 seconds or less
Seek Tuning	0.5 seconds or more

Note:

- If you continue pressing the button for longer than 0.5 seconds, you can skip broadcasting stations. Seek Tuning starts as soon as you stop pressing the button.
- "O" stereo indicator lights when a stereo station is selected.

• You can memorize broadcast stations in buttons 1 through 6 for easy, one-touch station recall.

1 till ough o for	cusy, one-touch station recan.	
Preset station recall	2 seconds or less	

2 seconds or more

 \rightarrow AM

Note:

- Up to 18 FM stations (6 in FM1, FM2 and FM3) and 6 AM stations can be stored in memory.
- You can also use the ▲ or ▼ buttons to recall broadcast stations memorized in buttons 1 through 6.

Broadcast station preset memory

Basic Operation of Built-in CD Player

Eject

Note:

- The CD function can be turned ON/OFF with the disc remaining in this product.
- Discs left partially inserted after ejection may incur damage or fall out.

The built-in CD player plays one standard 12 cm or 8 cm (single) CD at a time. Do not use an adapter when playing 8 cm CD.

Track Search and Fast Forward/Reverse

• You can select between Track Search or Fast forward/Reverse by pressing the ◄/▶ button for a different length of time.

Track Search	0.5 seconds or less
Fast forward/Reverse	Continue pressing

Note

- If a disc cannot be inserted fully or playback fails, make sure the recorded side is down. Push the EJECT button and check the disc for damage before reinserting it.
- If a CD is inserted with the recorded side up, it will be ejected automatically after a few moments.
- If the built-in CD player cannot operate properly, an error message (such as "ERROR-14") appears
 on the display.

Audio Adjustment

Selecting the Equalizer Curve

You can switch between Equalizer curves.

• Move the EQ button up or down to select the desired Equalizer curve.

POWERFUL \leftrightarrow NATURAL \leftrightarrow VOCAL \leftrightarrow CUSTOM \leftrightarrow EQ FLAT \leftrightarrow SUPER BASS

Note:

- "CUSTOM" stores an equalizer curve you have made adjustments to.
- You can create different "CUSTOM" curves for different sources.

Entering the Audio Menu

With this Menu, you can adjust the sound quality.

Note:

- After entering the Audio Menu, if you do not perform an operation within about 30 seconds, the Audio Menu is automatically canceled.
- 1. Select the desired mode in the Audio Menu.

Each press changes the Mode ...

- 2. Operate a mode.
- 3. Cancel the Audio Menu.

Audio Adjustment

Audio Menu Functions

The Audio Menu features the following functions.

Balance Adjustment (FADER)

This function allows you to select a Fader/Balance setting that provides ideal listening conditions in all occupied seats.

- 1. Press the AUDIO button and select Fader/Balance mode (FADER) in the Audio Menu.
- Adjust front/rear speaker balance with the ▲/▼ buttons.

"FADER F15" – "FADER R15" is displayed as it moves from front to rear.

3. Adjust left/right speaker balance with the **◄/►** buttons.

"BAL L 9" – "BAL R 9" is displayed as it moves from left to right.

Note

• "FADER 0" is the proper setting when 2 speakers are in use.

Equalizer Curve Adjustment (EQ-LOW/MID/HIGH)

You can adjust equalizer curve settings as desired. Adjusted equalizer curve settings are memorized in "CUSTOM".

- 1. Press the AUDIO button and select the Equalizer mode (EQ-LOW/MID/HIGH) in the Audio Menu.
- 2. Select the band you want to adjust with the ◄/▶ buttons.

EQ-LOW ↔ EQ-MID ↔ EQ-HIGH

3. Boost or attenuate the selected band with the **△**/**▼** buttons.

The display shows "+6" - "-6".

Note:

 If you make adjustments when a curve other than "CUSTOM" is selected, the adjusted curve is stored in memory as a "CUSTOM" curve. Also, the displayed curve switches to that selected before adjustments were made.

Audio Menu Functions

The Audio Menu features the following functions.

Balance Adjustment (FADER)

This function allows you to select a Fader/Balance setting that provides ideal listening conditions in all occupied seats.

- 1. Press the AUDIO button and select Fader/Balance mode (FADER) in the Audio Menu.
- 2. Adjust front/rear speaker balance with the ▲/▼ buttons.

"FADER F15" – "FADER R15" is displayed as it moves from front to rear.

3. Adjust left/right speaker balance with the **◄/►** buttons.

"BAL L 9" – "BAL R 9" is displayed as it moves from left to right.

Note

• "FADER 0" is the proper setting when 2 speakers are in use.

Equalizer Curve Adjustment (EQ-LOW/MID/HIGH)

You can adjust equalizer curve settings as desired. Adjusted equalizer curve settings are memorized in "CUSTOM".

- 1. Press the AUDIO button and select the Equalizer mode (EQ-LOW/MID/HIGH) in the Audio Menu.
- 2. Select the band you want to adjust with the ◄/► buttons.

3. Boost or attenuate the selected band with the △/▼ buttons.

The display shows "+6" - "-6".

Note:

 If you make adjustments when a curve other than "CUSTOM" is selected, the adjusted curve is stored in memory as a "CUSTOM" curve. Also, the displayed curve switches to that selected before adjustments were made.

Equalizer Curve Fine Adjustment

You can adjust the center frequency of each equalizer curve band (LOW/MID/HIGH) and the Q factor (curve characteristics).

- 1. Press the AUDIO button for 2 or more seconds to select Equalizer Curve Fine Adjustment.
- 2. Press the AUDIO button to select the desired band for adjustment.

3. Select the desired frequency with the **◄/►** buttons.

LOW:
$$40 \leftrightarrow 80 \leftrightarrow 100 \leftrightarrow 160 \text{ (Hz)}$$

MID: $200 \leftrightarrow 500 \leftrightarrow 1\text{K} \leftrightarrow 2\text{K} \text{ (Hz)}$
HIGH: $3\text{K} \leftrightarrow 8\text{K} \leftrightarrow 10\text{K} \leftrightarrow 12\text{K} \text{ (Hz)}$

4. Select the desired Q factor with the △/▼ buttons.

$$2N \leftrightarrow 1N \leftrightarrow 1W \leftrightarrow 2W$$

Loudness Adjustment (LOUD)

The Loudness function compensates for deficiencies in the low and high sound ranges at low volume. You can select a desired Loudness level.

- 1. Press the AUDIO button and select the Loudness mode (LOUD) in the Audio Menu.
- 2. Switch the Loudness function ON/OFF with the △/▼ buttons.

LOW ↔ MID ↔ HI

Note:

 You can also switch the Loudness function ON/OFF by pressing the LOUD button. However, you cannot change the level.

Audio Adjustment

Front Image Enhancer Function (FIE)

The F.I.E. (Front Image Enhancer) function is a simple method of enhancing front imaging by cutting mid- and high-range frequency output from the rear speakers, limiting their output to low-range frequencies. You can select the frequency you want to cut.

Precaution:

- When the F.I.E. function is deactivated, the rear speakers output sound of all frequencies, not just bass sounds. Reduce the volume before disengaging F.I.E. to prevent a sudden increase in volume.
- 1. Press the AUDIO button and select the F.I.E. mode (FIE) in the Audio Menu.
- 2. Switch the F.I.E. function ON/OFF with the **△**/**▼** buttons.

3. Select the desired frequency with the **◄/►** buttons.

$$100 \leftrightarrow 160 \leftrightarrow 250 \text{ (Hz)}$$

Note:

- After switching the F.I.E. function ON, select the Fader/Balance mode in the Audio Menu, and adjust front and rear speaker volume levels until they are balanced.
- Switch the F.I.E. function OFF when using a 2-speaker system.

Source Level Adjustment (SLA)

The SLA (Source Level Ajustment) function prevents radical leaps in volume when switching between sources. Settings are based on the FM volume, which remains unchanged. (Since the FM volume is the control, SLA is not possible in the FM modes.) The AM and CD levels can all be adjusted.

- 1. Compare the FM volume with the volume of the other source. (e.g. Built-in CD player)
- 2. Press the AUDIO button, and select the SLA mode (SLA) in the Audio Menu.
- 3. Increase or decrease the level with the **△**/**▼** buttons.

The display shows "+4" – "-4".
